CF-101 Cloud Foundations Associate

Exam Blueprint and Scoring Rules (Document ID: CF101-BLUEPRINT)

CF-101 is a **fictional** entry-level cloud certification used for training purposes. This document defines the exam structure, domain weights, scoring method, passing score, and exam policies. Every numeric rule needed to compute a scaled score is in this document.

Table 1.1 - CF-101 exam format

Item	Value
Total questions	60
Time limit	90 minutes
Average time budget per question	90 seconds
Question types	Multiple choice, multiple response, drag-and-order
Passing scaled score	700 out of 1000
Negative marking	None (unanswered counts as incorrect)
Exam fee	99 USD

Table 1.2 - Domain weights and question counts

Domain	Weight (%)	Questions
Cloud Concepts	15	9
Compute & Networking	25	15
Storage & Data	20	12
Security & Identity	25	15
Monitoring & Cost	15	9
TOTAL	100	60

Scoring method

The scaled score is computed in three steps:

- Step 1: For each domain, compute the domain percentage = correct answers / questions in that domain x 100.
- Step 2: Compute the weighted percentage = sum over domains of (domain weight / 100 x domain percentage).
- Step 3: Scaled score = weighted percentage x 10. Example: a weighted percentage of 70.0 gives a scaled score of 700, which is exactly the passing score.

Table 1.3 - Worked scoring example (illustrative candidate, not the student)

Domain	Weight (%)	Domain score (%)	Contribution
Cloud Concepts	15	80	12.00
Compute & Networking	25	70	17.50
Storage & Data	20	65	13.00
Security & Identity	25	60	15.00
Monitoring & Cost	15	75	11.25
Weighted percentage			68.75
Scaled score			687.5 (FAIL, below 700)

Domain content

Table 1.4 - Topics inside each domain and their share of the domain

Domain	Topic	Share of domain (%)
Cloud Concepts	Shared responsibility model	35
Cloud Concepts	CapEx vs OpEx, consumption pricing	30
Cloud Concepts	Regions, region pairs, availability	35
Compute & Networking	Virtual machines and scale sets	30
Compute & Networking	Virtual networks, peering, VPN	40
Compute & Networking	Load balancing	30
Storage & Data	Redundancy options	35
Storage & Data	Access tiers and lifecycle	25
Storage & Data	Database service selection	40
Security & Identity	Role-based access control	35
Security & Identity	Managed identities and service principals	25
Security & Identity	Network security rules	25
Security & Identity	Key and secret management	15
Monitoring & Cost	Metrics vs logs	40
Monitoring & Cost	Budgets and cost alerts	30
Monitoring & Cost	Reservations and savings plans	30

Table 1.5 - Retake policy

Attempt	Waiting period (days)	Fee (USD)
First retake	1	99
Second retake	14	99
Third retake	14	99
Fourth and later	365	99

Readiness guideline: schedule the real exam only after two consecutive mock exams reach a scaled score of at least 750. The 50-point margin over the passing score protects against exam-day variance.
